The two principal parts for men are diametrically opposed in quality: one is the character of a hard, cold, ruthless prosecutor: the other is an unsalish, likable young banker, whose good traits so far outwelgh his technical criminality that the sympathy of the audience is always with him. According to the old rule of "playing of the audience is always with him. According to the following him of the session yet to consider, and the leading man," Mr. Arnold should have played the young banker, a part which he is eminently fitted to handle, and the role of the prosecutor should have been left to take care of tiself, lacking a typical "heavy" man, as the company does.
